

## cbse-eng-07-sci-3-2-7

From fibers to wool, sheep are mainly reared for their wool. They are shorn annually in the spring or summer for their hair. This hair is collected and processed to produce the wool in the factories.

### Summary:

**Wool** is obtained from **sheep**, which are mainly reared for their **woolly hair**.

- Sheep are **shorn annually** (once a year) in the **spring or summer** to collect their wool.
  - The collected **hair is processed in factories** to produce **wool**, which is then used to make woolen clothes and fabrics.
- 

### Quiz:

#### 1. Why are sheep reared?

- a) For their wool ☒
- b) For their teeth ☐
- c) For their skin ☐
- d) For their tails ☐

#### 2. When are sheep usually shorn?

- a) In spring or summer ☒
- b) In winter ☐
- c) Every month ☐
- d) Only when they die ☐

#### 3. What happens to the hair collected from sheep?

- a) It is processed to produce wool in factories ☒
- b) It is thrown away ☐
- c) It is used as food ☐
- d) It is not used for anything ☐

#### 4. What is wool used for?

- a) Making woolen clothes ☒

b) Making plastic bags ✕

c) Making glass items ✕

d) Making metal tools ✕
